

What are your employees doing on their computers?

Hopefully what you pay them for. The problem is you can not watch everyone every minute of the day. If you thinking that someone in the office is not being as productive as they should be, we may have a way to help. Employees who have Internet access at work average MORE THAN ONE HOUR PER DAY SURFING the INTERNET. Some employees spend THREE HOURS PER DAY or MORE surfing. Guess what? They're not working when they're surfing!!!!

We have a solution!

Record Exactly what they are doing

While Internet access can be a great tool to provide your employees, it also comes with its own set of problems: inappropriate surfing (pornography, chat, instant messaging, etc...), spending too much time on non-work related web sites, leaking company confidential information via email or on anonymous chat boards, propagating racially or sexually offensive emails, utilizing company resources to engage in illegal or unethical activities.

Control Exposure To Legal & Financial Hazards

- LOST PRODUCTIVITY is only one of the problems with employees surfing.
- POTENTIAL LEGAL LIABILITY is a second major problem.
What happens when employees propagate racially or sexually offensive e-mails and jokes?
What happens if one of your employees using a company computer to seduce a child over the Internet? If they use your computers to gamble online?
- LEAKING OF COMPANY CONFIDENTIAL INFORMATION is the third big problem associated with uncontrolled Internet access.
What happens when an employee goes into financial chat sites and starts leaking company secrets? When they create rumors to try to manipulate your company's stock price? When a disgruntled employee starts e-mailing the competition your customer lists?

Spector Pro Takes Control

What can you do about this, short of taking away their Internet access altogether? You could choose a filtering solution. But filtering is well known to have three major problems: constant updating, preventing access to totally legitimate sites, and often allowing access to completely objectionable sites. You can RECORD what they do with Spector Pro. Spector Pro acts like a hidden camcorder, constantly taking pictures of what each employee is doing, without slowing down their work at all. In addition, Spector Pro will save a copy of all incoming and outgoing email, create a log of chat and instant messages as well as record every keystroke typed! And how do people act when they know they are being watched? They are on their best behavior. You can expect a significant drop in the kinds of activities that threaten the survival of your company. With Spector Pro, you will be able to quickly identify the employees who are the worst offenders, and have the VISUAL proof to handle the situation in the manner you deem most appropriate.

When you need to KNOW EXACTLY what your employees are doing Online and Offline with company computers, Spector is the tool of choice.
