

Protecting your valuable data assets.

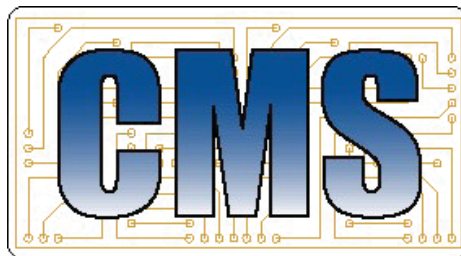

You rely on your computers, especially the data you store on them, to power your business. Consequently, hard drive crashes, viruses, and theft pose three very realistic, very common threats. In fact, each year 50% of small businesses that regularly access the Internet lose some or all of their valuable data. When it happens, it can cripple your operations.

Are you willing to live with the risk? There's no need to.

We deliver a easy, solid data protection plan.

In partnership with StorGrid, a premier provider of data security and protection services, we provide the ideal service for online PC data backup. For competitive cost compared to other backup solutions, the plan delivers the greatest possible peace of mind. Using the program is remarkably simple. Here's how it works:

- Easy setup – It takes only minutes to download and install a small software “agent” that automates your backups. You use the agent to initiate an initial backup, schedule future backups, retrieve files, review logs, and manage your account.
- Automatic backup – The data protection plan is entirely automated and easy to control. You perform an initial backup to begin and then dictate the schedule you want for automatic subsequent backups. All data is archived (mirrored) to an ultra-secure data center.
- On-demand data retrieval – When you need to retrieve your data, you can do so anytime with only a few mouse clicks, and you can save up to three previous versions of a file for 30 days. Plus, all files you delete are saved for 30 days.
- Complete Support – World-class customer support experts are available to help with all your data backup needs.

Computer Maintenance Service's Data Backup is simple:

True Peace of Mind: The service automatically backs up your computer to secure data centers through a secure Internet connection. Your data is backed up to dual mirrored sites that are miles apart — so even a natural disaster won't affect it.

Secure Connectivity: The program employs 128-bit AES, the same encryption used to protect classified U.S. government documents.

Serious Value: Our data backup solution combines the power and protection of a corporate solution at a price every business can afford. Pricing options start at less than 50 cents a day.
