

## Protect Your Company With the Leader in Secure Email Boundary Services

### The Most Comprehensive, Flexible, And Trusted Email Security Solution

Perimeter Manager Enterprise Edition is the industry's most comprehensive, flexible and trusted email security service. Based on our patented managed service platform, Postini blocks spam, phishing, viruses and other email threats before they can reach your enterprise email gateway. By choosing Postini Perimeter Manager Enterprise Edition your enterprise can effectively prevent evolving email threats from impacting your network and end users, reduce complexity, ease your administrative burden and lower your total cost of ownership when compared to software and/or appliance products. No other email security provider can match Postini's scope and depth of secure email boundary services for the enterprise by offering you:

- **Comprehensive email threat prevention to stop spam, viruses, phishing and directory harvest attacks**
- **Flexible email security policy enforcement for both inbound and outbound emails and attachments**
- **Support for secure encrypted email transmission over the Internet based on the TLS protocol standard**
- **Complete email management and reporting through a convenient web console**
- **Lower Total Cost of Ownership with patented preEMPT managed service technology**
- **High availability, fault tolerant email processing**

### Comprehensive Email Intrusion And Threat Prevention

Postini Perimeter Manager stops spam, phishing, viruses, directory harvest attacks and other email threats with patented, multi-layer technology that delivers unmatched threat prevention and email protection. Postini's preEMPTM technology processes email in real-time, through a highly secure system architecture that operates with no detectable latency, no data loss, and no security compromises. Email is initially screened at the SMTP connection point through patent-pending IP "behavior" analysis capable of eliminating up to 50% of invalid connections to your network. The

balance of email is then screened through Postini's content filtering rules and heuristics to eliminate spam and other threats and enforce corporate and/or regulatory policy. All suspect email is blocked, and legitimate email is instantly forwarded to the enterprise destination mail server in real time, from memory. Based on your enterprise's email security policy, you can select the appropriate disposition for suspicious email; administrator quarantine, delete, log, or quarantine to a web-accessible storage area for user review.

Processing more than 400 million inbound SMTP connections every day from 10 to 15 million distinct IP addresses, Postini currently blocks more than half of SMTP connections while the balance of messages are then screened by its award-winning content filtering. This exclusive multi-layer approach incorporating real-time IP analysis and advanced content filtering has proven to be highly effective in combating the shifting tactics of spammers and in preventing mail threats from harming enterprise email systems.

### What is Spam really costing you?

If someone is receiving just 60 spam emails each day, it takes 10 seconds to deal with each one and they value their time at \$35 an hour then spam would cost them about \$2100 worth of their time over the course of a year. One estimate claims that spam costs U.S. businesses roughly \$70 billion each year. This does not include the costs for storage of spam e-mail, support related to spam issues (such as viruses, spyware, or malware), or internet connectivity.

### We support all your online needs.

Computer Maintenance Service Inc. focuses on turning on the power of the Internet — every minute of every day — all over the globe. We provide solutions with unparalleled scalability to suit the needs of companies, large and small. Our robust suite of services includes domain registration, Website creation, Web & E-mail hosting, online marketing, e-commerce, data backup, managed services, Premium Spam Filtering and more.
